

Comply with Waste Storage Standards

廃棄物の保管基準を守りましょう！
【英語】

Ensure full compliance with all applicable waste storage requirements.

All waste generated at the facility must be stored properly on site in accordance with applicable waste storage standards until it is collected for transport. Facilities are required to comply with all legal requirements and storage regulations to prevent adverse impacts on the surrounding environment and public health.

Storage standard 1: Installation of an enclosure

- The waste storage area must be enclosed by a fence, barrier, or other appropriate structure.

Storage standard 2: Installation of signage

- A sign displaying the required industrial waste storage information must be posted where it can be easily seen.
Note: See below for specific examples.

Storage standard 3: Height restrictions

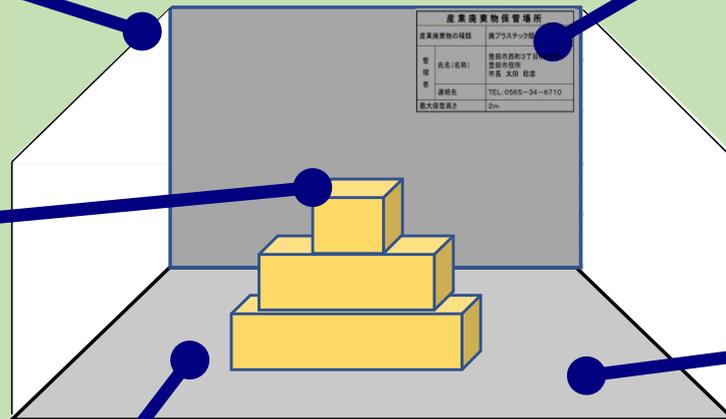

- When waste is stored outdoors without containers, the storage height must not exceed the statutory limit.

Storage standard 4: Prevention of dispersal and leakage

- Appropriate measures must be implemented to prevent waste from scattering, flowing out, seeping into the ground, or emitting bad odors. In the case of rubble and similar waste that does not have organic matter adhered to it, compliance with this requirement alone is sufficient.
However, where there is a potential for leachate (contaminated water) generation, additional preventive measures must be taken, such as installing an impermeable lining at the base of the storage area.

Storage standard 5: Environmental sanitation

- Measures must be taken to prevent rats to live and mosquitoes or other vermin to be generated there.

産業廃棄物保管場所	
産業廃棄物の種類	廃プラスチック類
管理 者	氏名(名称) 〇〇会社 代表取締役〇〇
	連絡先 TEL: 〇〇-〇〇〇〇
最大保管高さ	〇〇m

Legal basis: Article 12, Paragraph 2 of the Waste Management and Public Cleansing Law

Signage at Waste Storage Areas

An information board displaying all required details must be installed at the waste storage area.

産業廃棄物保管場所		
産業廃棄物の種類	廃プラスチック類	
管理 者	氏名(名称)	〇〇会社 代表取締役〇〇
	連絡先	TEL: 〇〇-〇〇〇〇
最大保管高さ	〇〇m	

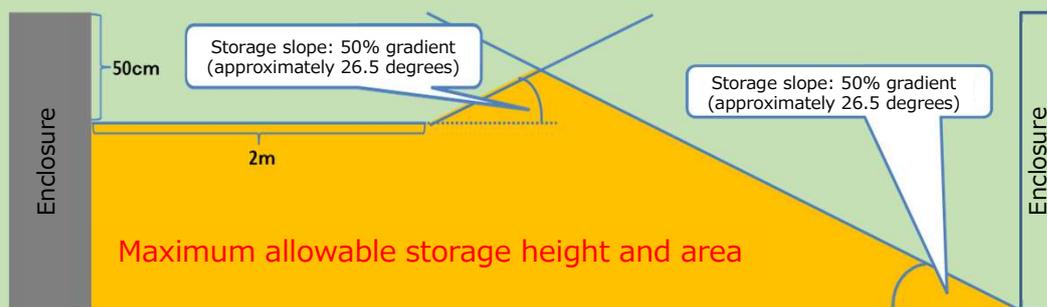

- Identification of the area as a waste storage site
- Type(s) of waste stored
- Name and contact information of the waste-producing enterprise
- Maximum permitted storage height*
- Board dimensions: minimum 60 cm × 60 cm
- The information board must be displayed where it can be easily seen

* The maximum storage height is required to be displayed only when waste is stored outdoors without containers.

Strict comply with all legally prescribed standards!

Industrial Waste Storage Height Limits

All industrial waste must be stored in compliance with the legally prescribed height limits.

When waste is stored in direct contact with the enclosure

- For the first 2 meters inward from the inside face of the enclosure, the waste must be maintained at least 50 cm below the top edge of the enclosure.
- Beyond this 2-meter zone, the slope of the waste must not exceed a 50% gradient, measured from the 2-meter point.
- The enclosure must be structurally sound and capable of withstanding the load and lateral pressure exerted by the stored waste.

When waste is NOT stored in direct contact with the enclosure

- The slope of the waste pile must not exceed a 50% gradient, measured from the base of the enclosure.

Reporting Requirements for the Storage of Specified Industrial Waste*

*Construction waste (waste generated from the construction, renovation, or demolition of structures), or waste tires.

Notification is required when the applicable conditions (indicated by ○ in the table) are met.

Classification		Storage location	Outside the waste generation site		Within the waste generation site
			Area	100 m ² or more	300 m ² or more
National law	Construction waste	Indoor storage	–	○	–
		Outdoor storage	–	○	–
Municipal ordinance	Construction waste	Indoor storage	–	–	–
		Outdoor storage	○	–	○
	Waste tires	Indoor storage	–	–	–
		Outdoor storage	○	○	○

Outdoor storage of construction waste or waste tires in an area of 100 m² or more:

Requires notification to Toyota City at least 14 days prior to the start of storage, in accordance with the municipal ordinance.

Construction waste stored outside the waste generation site in an area of 300 m² or more:

Requires notification in accordance with national law.

- Notification submitted 届出済み
- No notification required 届出不要
