

Toyota City Flood Hazard Map

Fujioka Junior high school district

Take action to protect yourself!

Maximum expected flooding conditions

Rainfall so heavy it is estimated to occur only once every 1,000 years

- Notes**
- The expected water level and areas shown on the map are based on calculations. Depending on how the rain falls, flooding may occur in unexpected areas, or the actual depth may differ from the expected depth.
 - This map was created based on information such as the flooding area map, inland water flooding area map, and reservoir hazard map.
 - Overflow from rivers managed by the national or prefectural government is analyzed by river administrators based on the "Manual for Creating Flood Hazard Area Maps (4th Edition)" (July 2015).
 - For overflow from some rivers managed by Toyota City, analysis made use of the PWRRI Model described in the "Guide for Creating Overflow Estimation Maps for Small Rivers" (June 2020).
 - The estimated flooding due to inland water overflow is shown for depths of 20 cm or more.
 - Overflow from reservoirs shows the affected area in the event of a full reservoir break.
 - The area of past flooding (2000 Tokai Flood) shown is based on interviews conducted at the time. This map contains analysis results reflecting changes in land use and urban facilities (such as residential land development), and past flooding (2000 Tokai Flood) may not be included in the area of estimated flooding.
 - Landslide Hazard Areas, etc. are current as of December 8, 2020.
 - The number and range of Landslide Hazard Areas, etc. may change due to subsequent basic surveys.
 - Temporary evacuation sites and temporary vehicle evacuation sites are facilities available for temporary use throughout the city.
